

Electronic Health Record

A Modern Approach

Problem Statement

To manage the medical records and sharing them with patient's doctors using mobile application that can make it easier for patients to store, manage, and share their medical records.

Introduction

- An EHR is a digital system used by healthcare providers to streamline their operations and provide more efficient care to patients.
- Healthcare providers strive to improve patient care and reduce costs.
- Benefits include improved patient safety, reduced medical errors, and increased efficiency in healthcare delivery.

Key Features

BLOCKCHAIN TECHNOLOGY

Decentralized System, Security, Smart Contracts

FAULT TOLERANCE

Decentralized System, Security, Smart Contracts

PEER TO PEER STORAGE

Decentralized System, Security, Smart Contracts

USER FRIENDLY GUI

Simple and Intuitive GUI

FLOWCHART

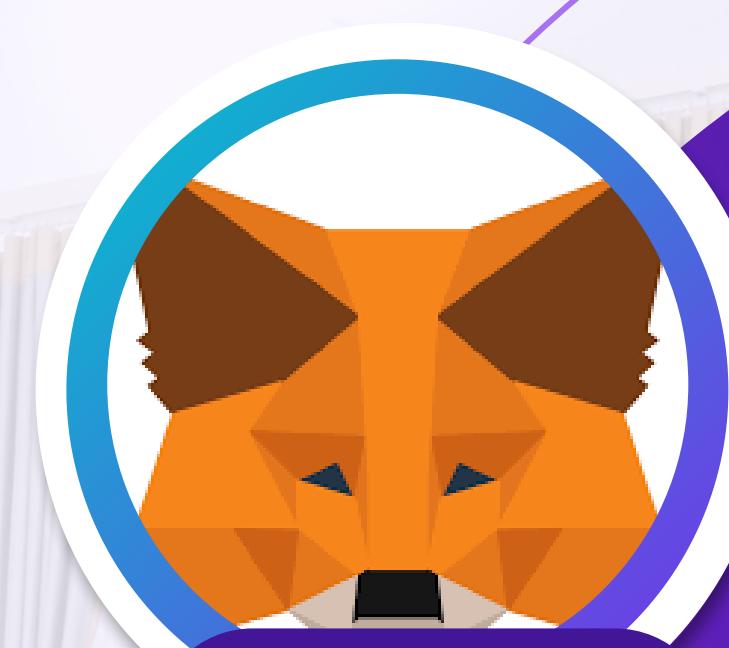

TOOLS and TECHNOLOGIES

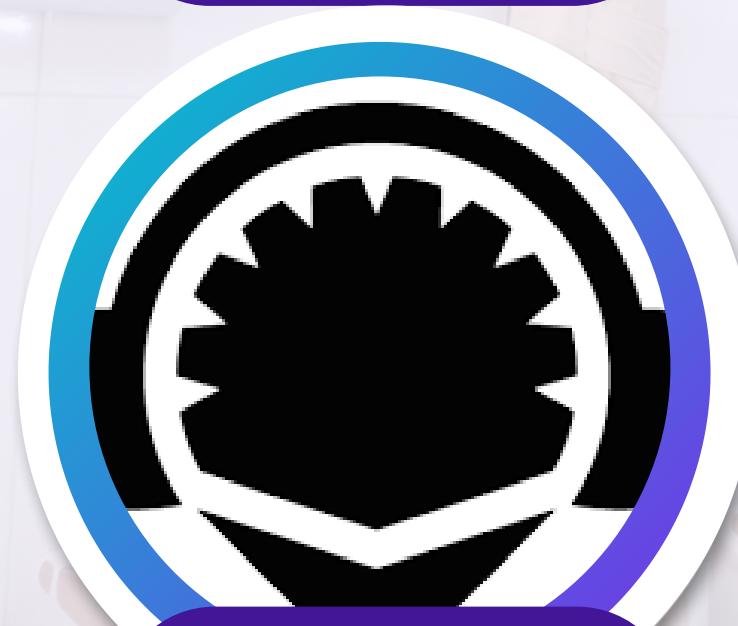

Node JS

Truffle

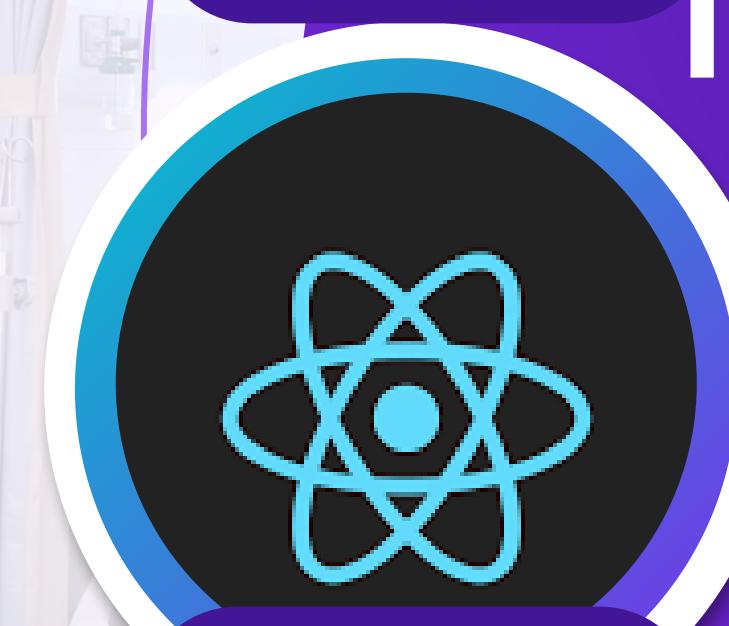

Metamask

Remix

IPFS

React
